Australian Citizen | Open to Hybrid/On-site | Available for ASIC Baseline/Suitability Checks

Junior AWS Engineer | Cloud Infrastructure | AWS Certified (CLF + SAA)

Professional Summary

AWS-certified junior cloud engineer with hands-on experience deploying a multi-tier web application on AWS using a lift-and-shift approach. Confident with core AWS services including EC2, S3, ALB, Auto Scaling, IAM, ACM, and Route 53 private hosted zones, plus Linux-based deployment workflows. Brings strong stakeholder engagement, training, documentation, and governance experience from roles in disability and community services, including delivering digital transformation outcomes and presenting high-level papers to leadership forums.

Certifications

- **AWS Certified Solutions Architect – Associate (SAA)**
 - **AWS Certified Cloud Practitioner (CLF)**
-

Technical Skills

AWS: EC2, S3, IAM, Security Groups, ALB, Auto Scaling Group, ACM, Route 53 (Private Hosted Zones), VPC fundamentals

Linux & Tools: Ubuntu, Amazon Linux, SSH, systemd, basic troubleshooting, AWS CLI, Git/GitHub

App/Infra Concepts: Networking basics, DNS, HTTPS/TLS, deployment validation, lift-and-shift migration

Build & Deployment: Maven, Tomcat (app deployment), artifact packaging and rollout

Documentation & Governance: Stakeholder briefings, decision papers, meeting packs, risk/issue tracking

Projects (Cloud)

- 1) **Lift-and-Shift Multi-Tier Web Application to AWS (V-Profile)**
- 2) **Collaborative website development with Git and GitHub**

3) Re-Architecting Web App on AWS Cloud [Cloud Native] – in progress

Tech: EC2, S3, ALB, Auto Scaling Group, IAM, ACM, Route 53 Private Hosted Zone, Security Groups, Ubuntu, Amazon Linux, Tomcat, MariaDB/MySQL (EC2), Memcached, RabbitMQ

- Migrated a VM-based multi-tier web application into AWS using a lift-and-shift strategy, establishing a production-style baseline architecture.
- Implemented network segmentation using Security Groups across load balancer, application, and backend tiers aligned to traffic flow.
- Deployed application tier on EC2 (Tomcat) behind an ALB and configured HTTPS using ACM.
- Enabled reliability and elasticity via Auto Scaling Group and target group health checks; configured stickiness to support session behaviour.
- Built and packaged the application using Maven, stored artifacts in S3, and deployed to the app server using AWS CLI workflows.
- Configured internal service discovery using Route 53 Private Hosted Zone DNS records and validated end-to-end connectivity.

Web Application Re-Architecture on AWS (In Progress)

- Re-architecting a web application to improve scalability, security, and maintainability using more managed AWS services and repeatable deployment patterns.
- Focus areas include VPC design, managed database (RDS), caching, CI/CD, monitoring/observability, and least-privilege IAM.

Professional Experience

Support Coordinator (NDIS) | EACH

Melbourne | December 2023 – Present

- Coordinate complex supports for participants by liaising with multiple stakeholders (providers, families, allied health, plan managers) to achieve service outcomes.
- Produce clear documentation, progress updates, and action tracking in a compliance-sensitive environment.

- Manage competing priorities and resolve issues under pressure while maintaining professionalism and confidentiality.
- Maintain strong written communication and structured reporting to support decision-making and continuity of care.

Project Officer | Life Without Barriers (LWB)

Melbourne | Jan 2020 – December 2023

Project: Transition from manual cash management to digital money management (CardHero) across LWB houses

- Supported the rollout of **CardHero** to replace manual cash handling processes, reducing risk of theft and improving controls and transparency.
- Delivered staff training and practical onboarding support to improve adoption and consistent use across houses.
- Liaised with diverse stakeholders including house staff, supervisors, finance/operations teams, and vendor contacts to coordinate implementation.
- Produced high-level papers and briefing materials for **ESG meetings**, supporting governance decisions and implementation oversight.
- Helped streamline workflows, returning time back to staff and supervisors by reducing manual cash reconciliation and errors.

Education

- **MSc (Research) Renewable Energy Engineering [Deakin University, Australia] – 2016**
- **MSc Advanced Control Systems [University of Salford, Manchester, UK] – 2014**
- **Bachelors Electrical Electronics Engineering [FUTO, Nigeria] - 2012**

Additional Information

- **Australian Citizen**
- Strong communication, stakeholder engagement, and training facilitation
- Comfortable in regulated/compliance-driven environments
